Information about the new season of the VYZOV Prize for future technologies

We are pleased to inform you that the VYZOV Foundation has started accepting applications for the VYZOV Prize for future technologies. This award recognizes significant breakthroughs in fundamental and applied science and engineering, with each prize totaling 12 million Russian rubles (approximately 130,000 US dollars).

The VYZOV Prize has five categories, four of which are dedicated to scientists based in Russia. We would particularly like to highlight the international category Discovery, which is open to scientists worldwide.

The five categories honor active researchers for achievements made primarily (but not exclusively) within the last decade:

- **Breakthrough:** for scientific research that has solved an important scientific or technological problem.
- **Engineering solution:** for a significant invention or the creation of a new technology.
- **Future:** for a scientific achievement that has influenced the dynamics of science and technology development (awarded to participants who have not reached the age of 35 at the time of application).
- **Scientist of the year:** for outstanding cumulative personal contributions and changing the landscape of science and technology.
- **Discovery (international category):** for a significant discovery that has influenced the development of science and technology.

Nominations can be submitted in three ways:

- Self-nomination.
- Nomination by a colleague who is a bona fide scientist.
- Nomination by any scientific organization (such as a university or research institute).

Applications are accepted until **May 21, 2025** at vyzovprize.com

The term «Vyzov» translates to «challenge» in Russian. The VYZOV Foundation is a private, independent, non-governmental organization with a distinguished Scientific Committee that ensures a fair and equitable selection process for all candidates.

VYZOV Foundation encourages scientists from all over the world to apply to push the boundaries of science and technology for a brighter future together!
